Art Unit: 1644

1. Claims 1-5, 11 and 21-22 are pending.
2. Applicant's election of Group I, claims 1-5, 11 and 21 in the Paper received 12-31-03 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

It is noted that claim 21 was not withdrawn from the official claim set.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 4 and 22 are rejected under 35 U.S.C. 102(e) as being anticipated by US patent application publication 2004/0033504 A1.

The '504 application teaches fragments of SEQ ID NO. 46, to be used in compositions with an acceptable carrier and as fusion proteins to be linked to the Fc region of an antibody, thereby meeting the limitations of the claims (see paragraphs 70, 74, 93 and 94 in particular). Attached is the sequence search which clearly indicates greater than 99% sequence identity of the prior art polypeptide with Applicant's claimed SEQ ID NO. 2. Since the '504 application

Art Unit: 1644

teaches fragments to be used in their compositions and fusion proteins, there are thousands of fragments of SEQ ID NO. 46 which are identical to fragments of applicant's SEQ ID No. 2.

The claimed invention is anticipated by the prior art teachings.

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 4 is broader in scope than claim 1 from which it depends, since claim 4 only requires nine contiguous amino acids, while claim 1 is limited to a polypeptide of 520 amino acids. Correction is required.

7. As presently recited claims 1-3, 5 and 11 are allowable.

8. The fax number for the organization where this application or proceeding is assigned is 703-872-9306.

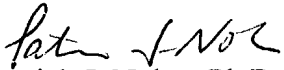

9. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system.
